

# Curriculum: Security in Web Development elective course

---

This material is prepared for use in *Security in Web Development* elective course and was prepared by Henrik Kramselund, [xhek@kea.dk](mailto:xhek@kea.dk).

Updated on 2022-11-01

It contains the curriculum for the course Fall 2022, which is:

- ☐ The whole book *Web Application Security*, Andrew Hoffman! All chapters are listed in the lecture plan
- ☐ The exam project is part of curriculum [security-in-web-development-exam-project.pdf](#)
- ☐ Slides, while not a replacement for the book are part of the content. The versions in Fronter may have a few typos, and the main source are in:  
<https://github.com/kramse/security-courses/tree/master/courses/system-and-software/security-in-web-development>
- ☐ The articles from Fronter: [How-GitHub-secures-open-source-software.pdf](#) and [secure-coding-best-practices-handbook-veracode-guide.pdf](#)
- ☐ I will mark the exercises in the exercise booklet which I think are important. I cannot force you to do them, but I expect you know about the subjects used in those exercises.

I will hand this document over to the censor for the course.

Best regards

Henrik Kramselund, he/him
